Responsible for coordinating scheduling, planning, and execution of performance of numerous high school bands. Coordinated with administration, faculty, and students.

SKILLS

Design:

Research and analysis of thematic and story related elements, computer-aided rendering techniques including real-time visualization, drafting and plating, system and equipment exploitation and limitation, flexibility and collaboration

Electrics:

Circuiting and electrical system calculations, data and power distribution, LED tape and related technologies, custom practical construction, advanced drafting and paperwork to communicate all levels of system implementation and utilization, low-level knowledge of DMX and RDM communication protocols

Dylan B Carter

Curriculum Vitae

Engineering:

Arduino and other development boards, C++ programming language, C programming language, Logic Design, JUCE Audio Framework, signal processing theory and implementation, Unix architecture, system simulation and stabilization, analog simulation techniques for digital systems

Software:

Vectorworks (advanced 2D & 3D), Lightwright 6 (advanced), QLab (intermediate), Inkscape Vector Editor (advanced), Vectorworks Vision (beginner), MATLAB (intermediate)

Administrative: Budgeting, scheduling, booking, planning, organization, equipment sourcing and utilization

SPECIAL PROJECTS

2023 B.S.E.E. Senior Design Project

“RDM Controller”

In collaboration with two computer engineering majors, we began prototyping a device which would allow users to more effectively use the RDM protocol. Unlike various lighting consoles on the market, the device focuses on RDM data only and passes DMX data through to the lighting system from other industry consoles. The software and hardware package aims to integrate real-time synchronization between Vectorworks and real-world lighting equipment.

Product still in development.

2022 Pennsylvania Shakespeare Festival

“Custom Lighting and Automation for ‘A Chorus Line’”

Managed development and execution of a custom lighting device for the production of “A Chorus Line”. A specially designed set of strip lights were developed for the “Music in the Mirror” scene. Full functionality was controllable from ETC Gio@5 via DMX.

2022 Current Trends in Music Engineering Final Project

“MIDI Controlled Lighting Interface for Multi-Media Performance”

Interfacing hardware and software created to map any MIDI keyboard performance to a set of LED tape. Various creative parameters and settings were implemented including color changes and mapping, and timing settings.
